Crypto Market.

In recent years, cryptocurrencies have established themselves on the market while experiencing tremendous growth. On average, we could observe a significant increase each year.

According to studies, this establishment will continue to grow over the next few years. By 2025, total capitalization is expected to grow tenfold.

Market Volatility.

The crypto market is one of the most volatile markets with fluctuations of up to 100% in short periods of time. This means that appropriate risk management becomes a challenge.

With a proper strategy and considering and eliminating all risks, however, this increased volatility can prove to be very profitable and offers many opportunities.

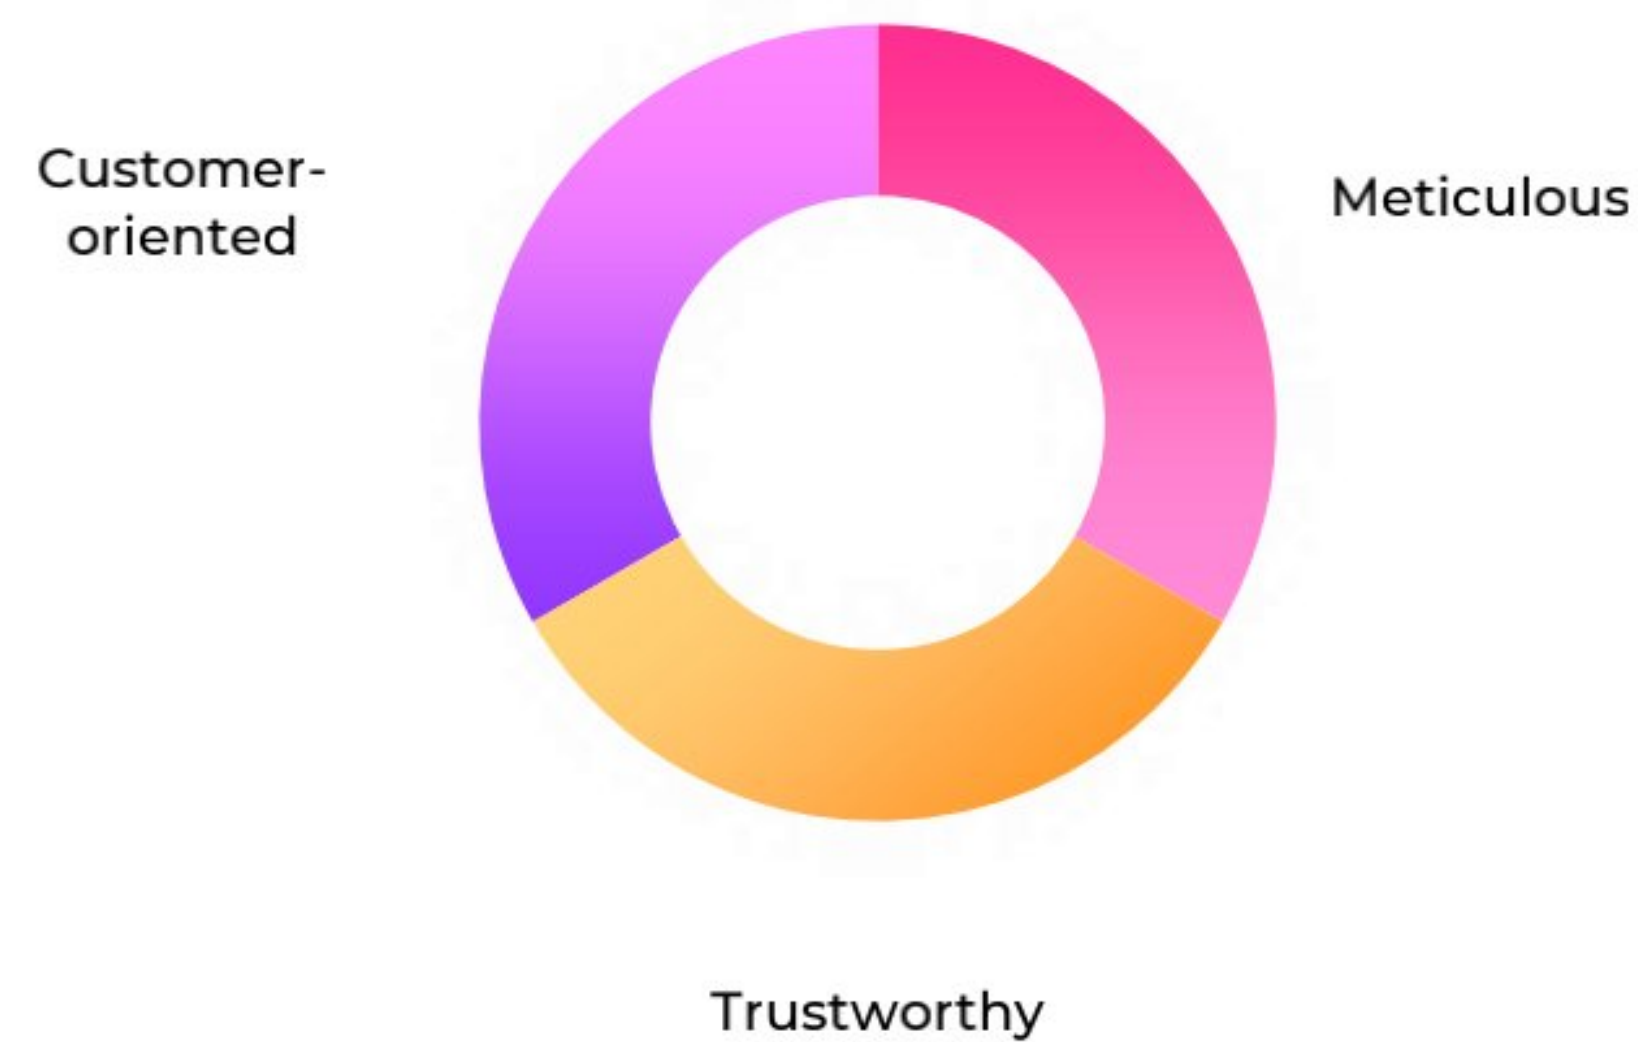

About Vortic United.

Key Competencies

Vortic United

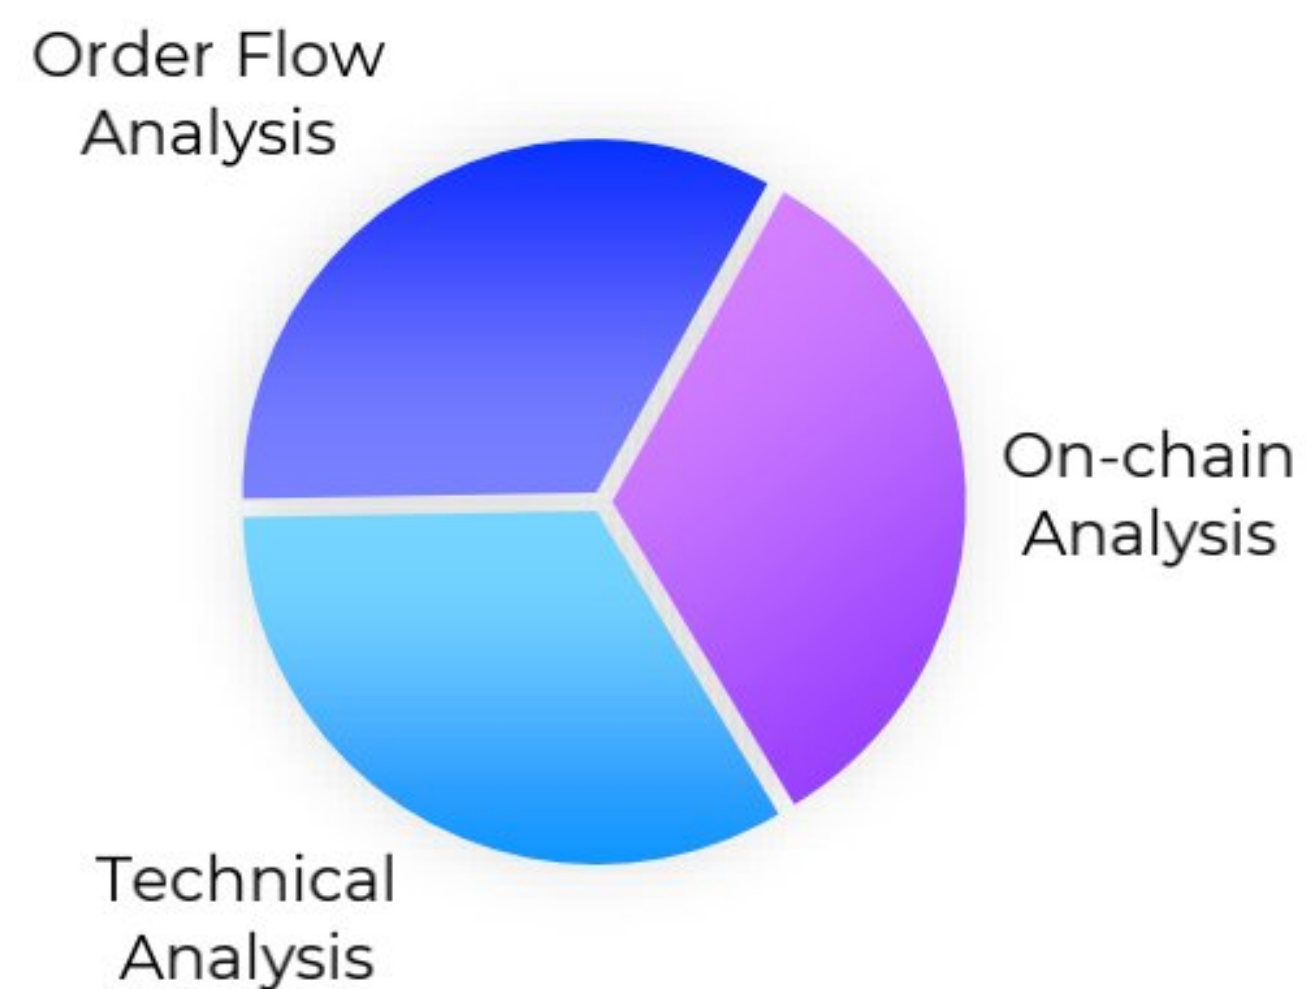

OUR VISION.

Our vision is clear and unambiguous. Vortic United will become one of the first reliable investment communities that will simplify this highly complex market and let everyone benefit from its potential. Our main goal is to create a community that benefits from the different aspects of the crypto market.

Visionaries see what others may believe.

Our entire community will benefit from unique opportunities and we will have a significant impact on the crypto market with our upcoming projects.

How we generate profit.

To secure the investments of our clients, we work with a strategy based on diversification and focused on profitability.

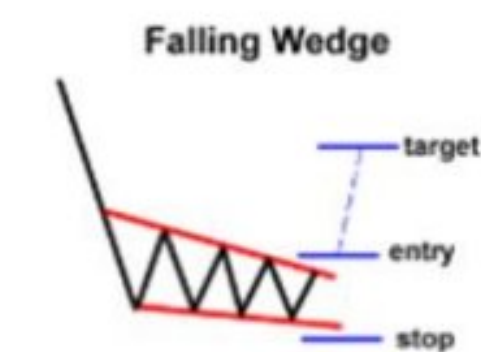

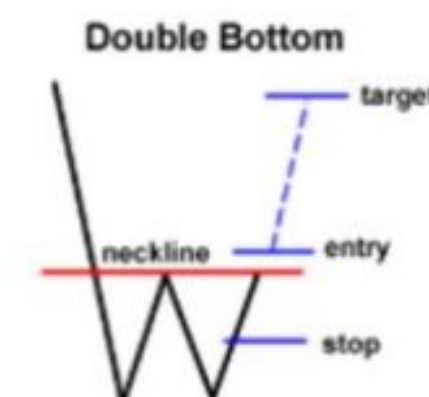

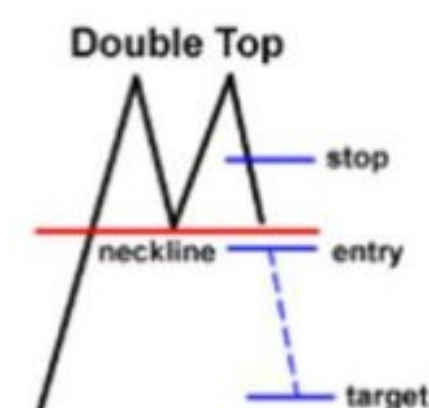

Trading decisions are made based on our three-point analysis.

Technical analysis.

Technical chart analysis is based on recurring trend patterns.

Historical data can be used to determine the probability of such patterns repeating.

For us, technical analysis is part of the decision-making basis for a possible trade.

On-Chain Analysis.

Bitcoin is the number 1 cryptocurrency and altcoins move in correlation to bitcoin. All transactions can be viewed transparently on the blockchain.

Transaction behavior can be processed and visualized with the help of on-chain indicators. Since these data are based on facts and events and not only on probabilities, valuable information can be gained and used for trading.

Orderflow Analysis.

We mainly use orderflow trading to manage portfolios.

Orderflow trading is based on market data and is used by institutions and professional trading firms. It is considered one of the most sophisticated but reliable strategies and basically a deep analysis of supply and demand.

While most traders in the crypto market rely on technical analysis only, the analysis of order books and order flow can be a decisive advantage.

Investors.

Investing in cryptocurrencies is not an easy case for private and institutional investors, as there are many factors that can have a big impact on the overall market.

If you are not actively involved with cryptocurrencies, it is almost impossible to manage the risks associated with them.

To minimize the risk and your time, we take care of your portfolio and increase your profits.

Investment Portfolios.

We cannot promise you a fixed return, as our performance is variable depending on the market situation. But based on our average past results we can give you approximate expectations.

The investment portfolios have a fixed term, which varies depending on the portfolio. As soon as a portfolio reaches the end of its term, it expires and no longer generates returns. In this case, 80% of the deposit is returned to you and credited to your account.

The Compounding Portfolio is a compound interest portfolio. This means that you will receive the profits generated on the working days only after the expiration of the portfolio, together with 80% of your deposit amount.
